DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 2003-031371.

The Japanese reference discloses an organic electroluminescent element comprising a luminescent layer disposed between an anode and a cathode on a substrate. Additionally, the reference discloses a hole blocking layer on the cathode side interface of the luminescent layer (see paragraph 0012). The reference discloses a compound, H-6,

that is used in the hole blocking layer. Compound H-6 of the reference is the same compound as found in instant claim 7 (compound B-9).

Double Patenting

3. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

4. Claims 1-7 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 and 7 of copending Application No. 10/779,874. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. Both applications recite an organic electroluminescent device, comprising:

a substrate;

a first and second electrode formed on the substrate;

a light-emitting layer formed between the first electrode and the second electrode; and

a hole blocking layer formed between the light-emitting layer and the second electrode; and

wherein the hole blocking layer is
